## EDUCATION

*Jaipur, Rajasthan*

**Manipal University Jaipur, Rajasthan** *Oct 2024 – May 2028*
B. Tech in Computer Science and Engineering (Core)
CGPA: **7.71** (as of 3rd Semester)

## SKILLS

- Programming Languages: C, C++, Python, SQL , MongoDB
- Web Development: HTML, CSS, JavaScript, React, Node.js, Next.js Tailwind CSS
- Data Analysis and ML: Regression Analysis
- Tools & Platforms: Git, GitHub, VS Code

## WORK EXPERIENCE

**Future Interns** *Jaipur , Rajasthan*
*Full Stack Web Development Intern* **(Remote)** *March 2026 – Present*

- Working on full-stack web development projects involving frontend and backend integration.
- Applying concepts of APIs, databases, and responsive UI design in real-world tasks.
- Collaborating in a remote team environment and following structured development practices.

## PROJECTS

1) **Credit Card Fraud Detection System | React, Python, ML -**Developed a Simple and basic machine learning– based system to detect fraudulent credit card transactions in real time. Implemented data preprocessing and model training using Logistic Regression and XGBoost. Built a React-based frontend and integrated ML model outputs for real-time prediction display
2) **Personal Finance Dashboard| React, JavaScript, APIs -** Built a Personal Finance Dashboard , web-based application designed to help users track and manage their financial activities. It allows users to record income and expenses, categorize transactions, and visualize their spending patterns through charts and graphs. The dashboard provides insights into budgeting and helps users make better financial decisions by presenting data in a clear and interactive way.
3) **Scientific Calculator | HTML, CSS, JavaScript -** Developed a web-based calculator supporting arithmetic operations, integrals, and differentials. Implemented clean UI design with efficient JavaScript logic for complex mathematical functions. Focused on usability and accuracy of computational results
4) **Digital Clock Application | React, JavaScript -** Implemented a real-time digital clock application with live time updates. Used API-based time synchronization for accuracy. Designed a lightweight and responsive interface using React

## RESEARCH EXPERIENCE

**AI in Healthcare Research (Ongoing) | Machine Learning –**
**Synthetic Clinical Data Generation Using AI: A Privacy-Preserving Approach for Medical Research**

- Authoring an IEEE-format research paper focused on applying machine learning techniques to healthcare data analysis and prediction.
- Exploring regression-based and representation learning approaches for clinical outcome prediction and risk assessment.
